

A BLUETOOTH™ DEVICE WHICH CONNECTS DIRECTLY TO ANY ANDROID SMARTPHONE OR TABLET

Digifob for Android application

To start using the digiBlu you simply download the free digifob for Android application from the Android market.

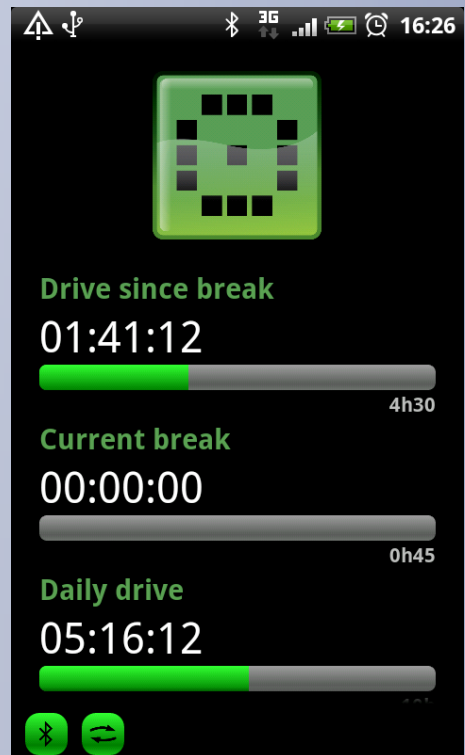

digifob for Android provides two applications in one. digiBlu provide a real-time data feed which monitors your Drivers Hours. The application provides up to the second information with visual warning when you need to take a break.

digifob for Android also supports download of the Tachograph although you will need a Company Card present in order to do this. This is the same for all download tools other than our remote download device digiDL.
